

Join our diverse team of motivated and creative individuals and have an immediate impact on our customers and our industry.

Web Developer

Cleveland, Ohio

We're looking for a web developer, front-end or back-end, who can provide and enjoy a lot of variety. You'll work with our design team, other engineers, the IT department, and others to build and maintain new and existing websites and enhance user experience across the company. With our horizontal structure and existing specialists, there's ample opportunity for you to learn and contribute from your first day through years to come. In this position, you'll start with the customer website, but may also contribute to the other projects listed.

A FEW THINGS YOU'LL BE WORKING ON

Customer Website - At MIM Software, we make a difference to doctors, patients, and families. That's why our communication with our customers is so important. You'll be completely redesigning our customer website for both sales and support considerations, and leading our company to an even closer relationship with our users.

MIMcloud - Medical images need to get from Point A to Point B. That's where MIMcloud.com comes in. MIMcloud engineers apply web technologies like Google App Engine, GWT, HTML5, CSS, and JavaScript to break down the borders between institutions, doctors, and patients, all while maintaining security, privacy, and usability.

CORE - Whereas other companies might pull in consultants and throw around words like "ERP," our internal database and extensive website (CORE) is developed completely in-house to manage our sales, support, product development, and testing. Running on MySQL, Ruby on Rails, and great ideas from all over the company, CORE development is fast, flexible, and fun.

"I can be an engineer, a writer, and a designer, all in the same day."

EMILY WARREN

Engineer Team Lead

Web Developer
